

## Mission Possible

“ I want to say how fantastic Nigel was in Mission Possible. He was outstanding at the “improv” comedy. I don’t think I have seen our group of people laugh like that in a long time. He is a real asset to your company! Everyone came away from the meeting giving great comments on the event.”  
M.W. - GE Healthcare Technologies

### Key Benefits:

- Group Problem Solving
- Fun

### Secondary Benefits:

- Communication
- Envisioning
- Resource Planning Skills
- Networking
- Goal Oriented Problem Solving
- Shared Experience

**The Activity:** The idea is loosely based upon the television show Mission Impossible. The event begins with the arrival of Jim Phelps, who plays the obligatory taped message for the audience. The group is then divided into Mission Possible task forces and presented with their top-secret directives. They also receive any and all equipment required to complete their “mission”.

After a five-minute planning session they embark upon their missions. Although the premise indicates a competitive event, the missions are designed to be group supportive and the various task forces develop a sense of interdependency early in the activity.

Upon the completion of the mission, they return to mission command central where each task force presents their completed mission to the group. This is followed by a summary talk by Jim Phelps, who draws the appropriate analogies from the mission achievements. The key message is that teamwork ensures that they will never face a Mission Impossible.

**Training Module or De-Brief:** This activity has been developed to neatly dovetail a wide variety of basic corporate issues although it can be constructed to meet the specific requirements of the client’s needs. We can customize this event to position key product information, underline marketing or sales initiatives or create an impactful motivational “call to action”.

**Minimum/Maximum group size:** This activity is suitable for groups up to 250 and is an excellent team builder.

**Program Length:** 2-3 hours.

**Space Requirements:** Flexible to the environment.
