

teambondingcsr®

“Our employees took creativity— and recyclable material—into new terrains ... Who knew solar cars could go so fast?! It was gratifying to know that our donation will make an impact on students ... for years to come.”

A.M. – POLYCOM

GO GREEN RACING

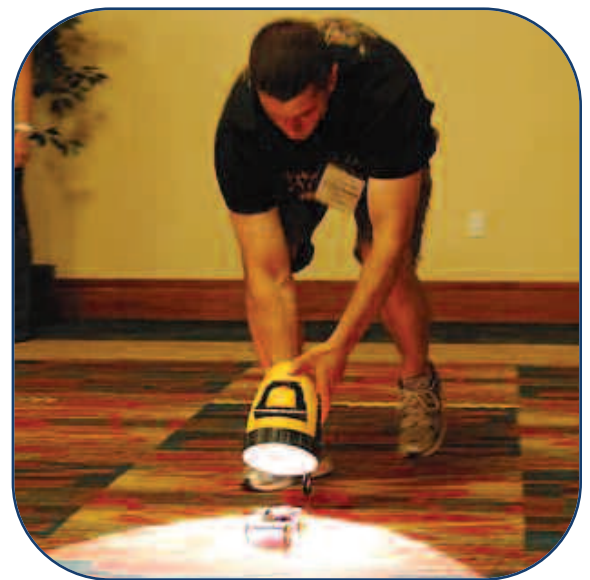

Builds Teamwork, Energy Awareness & Fast Cars!

Benefits & Results:

- Boosts morale and energizes team
- Advances awareness of green energy and conservation
- Promotes strategic thinking
- Builds collaborative problem solving
- Celebrates creative thinking
- All program materials donated to school or other beneficiary

Ready, Set, Go Green!

Go Green Racing is a fun, exciting program designed for socially responsible companies that want to build their teams while creating positive change in their community. This innovative team building program showcases the power of conservation, recycling, and green energy while invigorating teamwork and giving back to local schools. As each team collaborates and builds stronger bonds, they use their communication and engineering skills to build a fast solar car and a recycled car that they race against other teams' creations. At the end of the program, all materials, as well as new solar car kits and curricula, are presented to a well-deserving, local school to promote green energy awareness. *Ready, Set, Go Green!*

The Game:

In *Go Green Racing*, teams participate in three simultaneous activities designed to engage and entertain, while informing their green energy knowledge.

1) Building Solar Cars. Teams will create the ultimate, “mean green machines” using solar car kits. Using their ingenuity, creativity and powers of observation, teams tinker and tweak their creations until they develop their best model — the one that runs most smoothly and efficiently. Teams race against each other in a fast and furious relay race, complete with hand-offs of high-powered flashlights, to take home the checkered flag. Each car runs on its own merits as a limited number of “touches” is allowed by each team! It’s as entertaining as it is amazing!

2) Building Recycled Cars. It's turbo-charged trash to treasure! Teams use discarded parts from the solar car kits, plus everyday recycled materials, to create a totally recycled solar-powered vehicle. To spice up the challenge, they have to incorporate a unique design element. Recycled cars are tested for speed in a the Recycled Raceway Challenge, a head-to-head round robin drag race tournament which rewards speed! Only one team has what it takes the checkered flag!

3) Creating a Team Flag. As unique as the teams themselves, team flags represent each team's unique interpretation of environmental responsibility. Designed during the event, team flags may be unveiled before the final event to energize team spirit.

At the conclusion of the event, TeamBonding partners with local schools to donate all solar cars, new solar car kits and classroom curricula to area students on behalf of your company. These cars and new car kits are used by the schools to emphasize the importance of energy conservation, and to foster creativity and innovation within the classroom. We will do everything possible to arrange for a school or community representative to accept these gifts at the conclusion of your event, for a do-good, feel-good happy ending!

Ideal Usage:

- Conference/meeting breaks
- Project start-up, conclusion or mid-project motivation
- Award trips/annual Meetings
- Retreats and celebrations

Minimum/Maximum Group Size:

- Minimum 18 participants

Program Length:

- 2 hours

Space Requirement:

- Can be held indoors or out, depending on your needs
