

# csi: la hacienda

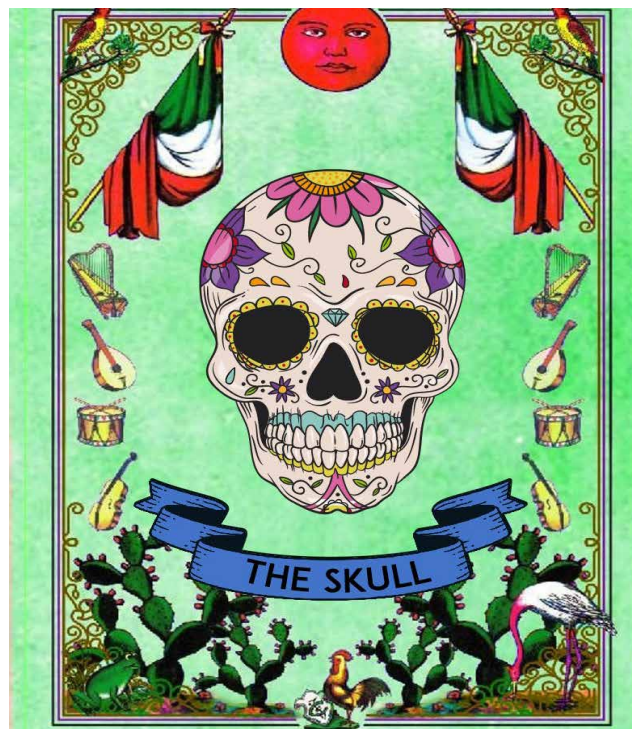

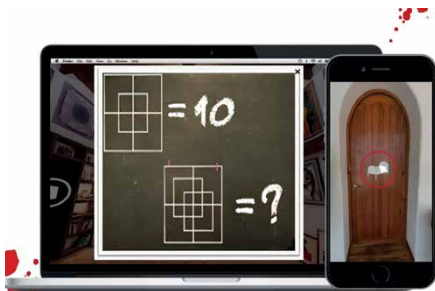

Teams sharpen their deductive reasoning and collaborative decision making in this immersive 3D whodunnit

## How It Works

Teams attempt to solve the mystery of the death of Enrique Gonzalez at his Hacienda. Using a web-based 3D Virtual Touring Platform teams explore the Hacienda looking for clues. The game app presents teams with riddles and challenges. Teams input their answers into the game app. Their solutions unlock hints that will help them solve the mystery. Moving through each room of the 3D Hacienda, teams find items that will also help them in their quest. Teams use deductive reasoning and team consensus to eliminate suspects. The team who accurately answer the challenges the fastest will discover the truth and be the winner.

## Learning Outcomes

Participants in the 3D Hacienda employ keen observation to acquire information. Utilising effective communication, they convey their findings to the team. Critical thinking and reflection will assist teams in analysing and interpret the facts. To come to a consensus, teams must use deductive reasoning and debate as they manage individual interpretations and conflicting opinion. Under the pressure of time, the teams who solve the mystery will be those that employ divergent thinking in collaborative decision making. This game challenges and develops team trust and unity.

## Key Outcomes

- ✓ Effective communication
- ✓ Deductive reasoning
- ✓ Collaborative decision making
- ✓ Developing trust
